

# PROBLEM SOLVING

FIND EFFECTIVE SOLUTIONS IN A TIME-EFFICIENT MANNER

TACKV

We all face problems in our lives, whether they be professional or personal. Sometimes an ad hoc approach to solving them may work, particularly with some of the simpler issues we have to sort.

When it comes to the more complex problems though, we need a more reliable, rigorous and consistent outcome to be successful in solving problems. So keen are we to find solutions that the real route cause is often overlooked in our haste to implement the solution.

So we end up wasting time, effort and energy doing the right thing for the wrong reasons. By involving our stakeholders early and keeping them informed as required there are no surprises for either them or us when it comes to making any decisions from the thought through options we can choose from.

1 Day Interactive Course

For anyone in the organisation who has a requirement to develop their problem solving competency

## THIS COURSE WILL ENABLE YOU TO:

- Take the appropriate steps to analyse a problem, well before identifying solutions too quickly
- Work through a proven framework for comparing options for a problem
- Use seven questions as a means to effectively analyse the problem
- Consider the impact and probability of options in terms of potential risks or barriers that could create more problems than they solve
- Undertake a mini version of the problem analysis and decision making process for all risks
- ... and many more!
